

ANGOLI e GIUNTI OMEGA per TELAI UTA - Profilo Doppia Parete CORNERS & OMEGA JOINTS for AHU's FRAMES - Double-Walled Profile

Questa serie di angoli e giunti omega è stata sviluppata per soddisfare l'esigenza di non avere le viti di fissaggio dei pannelli all'interno della UTA. Ciò garantisce una assoluta sicurezza contro eventuali infortuni da parte degli operatori e condizioni igieniche decisamente migliori. A questo scopo, sono stati anche sviluppati angoli con parete interna arrotondata, che consentono una perfetta pulibilità della centrale di trattamento dell'aria, condizione essenziale, ad esempio, in applicazioni alimentari o farmaceutiche. Disponibili in 2 dimensioni, 40 e 60 mm, anche per profili a taglio termico.

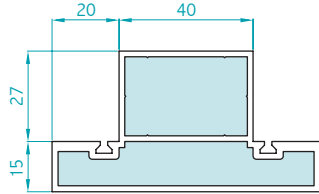

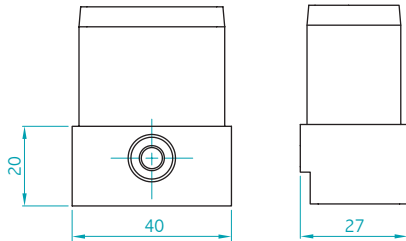

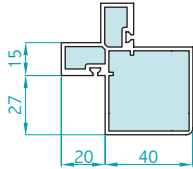

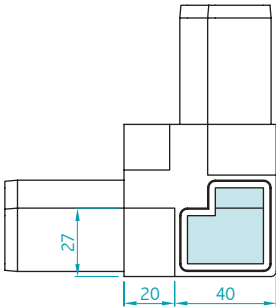

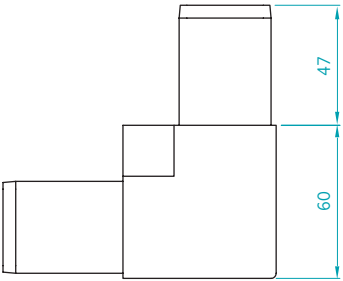

This series of corners and omega joints was developed to satisfy the need to avoid any panels screws inside the AHU. This ensures absolute safety against accidents by operators and much better hygienic conditions. For this purpose, have also been developed corners with rounded inside wall, perfectly cleanable, which is an essential condition, for example, in food or pharmaceutical applications. Available in two sizes, 40 and 60 mm, also for thermal break profiles.
